

325 Diagrammen

**Zeven om zeven standen in een
bijzondere opstelling**

Christ Verhaag

325 zeven om zeven damproblemen verzameld in een bundel. Niets speciaal zal men denken, maar het merkwaardige aan deze verzameling is dat alle velden precies even veel maal bezet zijn. 325 diagrammen maal 14 is 4550 schijven. Dit gedeeld door 50 is 91. Elk veld is dus 91 maal bezet.

Het hele uitzoeken werd met de hand gedaan in de tijd dat pc's nog in de kinderschoenen stonden, en men van Toernooibase nog nooit gehoord had. Alles is uitgeteld zonder rekenmachine of zonder speciaal ontworpen zoekprogramma voor computers. Wel werd het programma 'Excel' gebruikt om het een en ander schematisch voor te kunnen stellen.

Er werd een controle gedaan over ongeveer 2000 diagramstanden om te onderzoeken of ze in aanmerking kwamen om opgenomen te worden. In het eerste onderzoek waren hoofdzakelijk standen opgenomen die voldeden aan de scherpe regels van de problematiek. Dat waren vooral standen uit de drie laatste boeken van Gerhard Bakker, en ook nog een aantal andere damboeken. Na een controle van 500 diagrammen bleek al dat er een groot aantal overbezette velden waren. Dat waren hoofdzakelijk de centrumvelden, of beter gezegd de velden 20 tot met 40. Er waren ook een aantal pieken in de overbezetting, hoofdzakelijk op de velden van de lange lijn, zoals; veld 23, 28, 32 en 37. Ook waren er een groot aantal onderbezette velden, meer bepaald de twee onderste rijen van zwart: 1 tot met 10, en de twee onderste rijen van wit; 41 tot met 50. Ook daarin waren weer pieken met een sterke onderbezetting, hoofdzakelijk op de velden; 10, 11, 41 en 46.

Dan werd nog hoofdzakelijk gezocht naar diagramstanden met minstens zeven schijven op de twee onderste rijen van zwart en wit. Dus de velden 1 tot met 10 en de velden 41 tot met 50. Daarna werd gezocht om zoveel mogelijk schijven in een diagram te vinden op de sterk onderbezette velden. Uiteindelijk bleek dat door de twintig zeven om zeven standen die telkens om de 14 dagen verschijnen in 'Dammieuws' van Piet Lauwen, de verzameling te voltooien was. Hierdoor zijn er een groot aantal diagramstanden bij die niet aan de scherpe regels van de problematiek voldoen.

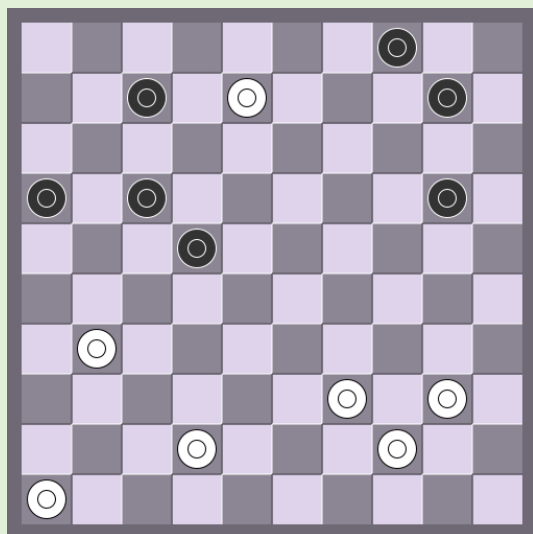

De vele honderden standen ben ik dan blijven "zeven" om de vele pieken en dalen eruit te halen. Een onvoorstelbaar priegelwerk dat heel veel tijd in beslag nam. Na vele weken zoeken en snoeien ben ik dan tot deze verzameling gekomen. Het enige waar ik nog niet tevreden over ben is dat niet alle diagrammen aan de scherpe regels voldoen. Ook heb ik bij enkele diagrammen een kleine aanpassing moeten doen, bv één schijf verplaatsen, om aan mijn vooropgesteld doel te geraken. Maar ik denk dat het in de toekomst mogelijk moet zijn een computerprogramma te ontwikkelen dat in een mum van tijd een verzameling problemen kan opsporen die aan de

scherpe regels voldoen, en die passen in het doel dat ik voor ogen had toen ik aan deze verzameling begon. Namelijk een verzameling van 500 diagrammen waarbij elk veld even veel maal bezet is.

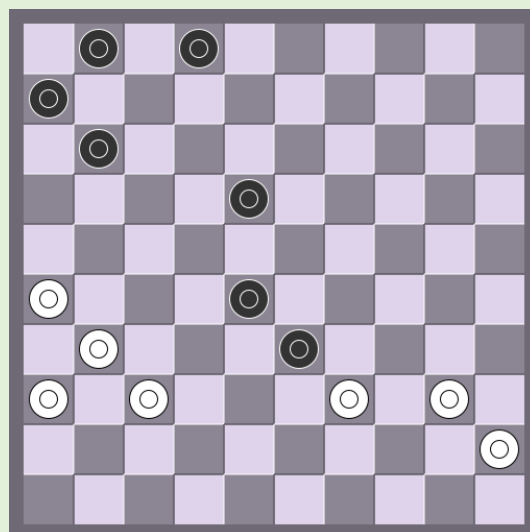

Ik ben helaas maar tot 325 geraakt.

We hopen dat u echter het nodige plezier aan de standen, en het oplossen ervan kunt beleven.
